

HIGH RISK CONFINED SPACE ENTRY & SUPERVISION

Duration: 2 Days (INITIAL)

Price: £475 + VAT per person (initial)

Theory: 30% Practical: 70%

Location: Element Safety - Sheffield

1 Day (REVALIDATION)

£275 + VAT per person (revalidation)

Valid for: 3 years

Assessment: Continuous

High risk confined space may require entry & supervision into a space with:

- serious access problems and limited ventilation
- unknown risks – full BA may be used for an initial investigative survey
- a specified risk that cannot be eliminated or controlled such as entry into a tank containing a toxic substance which cannot be removed
- a significantly reduced oxygen level.

Tasks will probably be further from the entry point, potentially be more complex, ventilation may be compromised, and breathable air is a primary concern. Entry will probably require self contained (or equivalent) breathing apparatus.

– a rescue plan must be in place and potentially a rescue team will be required

Course Aims - To train and assess individuals to safely supervise, enter, work in and exit spaces, which, due to their enclosed nature, their access/egress and their specified risk(s), have been classified as level 3 (high risk) confined spaces.

THE COURSE COVERS:

- Definitions, Risks, and Hazards, Risk Assessments, Safe Systems of Work, and Permits to Work
- Procedures for Entry, Environmental Monitoring and Ventilation
- PPE and additional level 3 associated equipment, Emergency Escape Breathing Apparatus and Self-Contained Breathing Apparatus
- Emergency procedures, Practical confined space entry and self-rescue scenarios

THE COURSE WILL ENABLE DELEGATES TO:

- Identify specified risks and hazards to classify confined spaces
- Understand confined space risk assessments, safe systems (method statements) and permits
- Have a sound understanding of environmental monitoring and ventilation
- Be confident in the use of gas monitoring and detection equipment
- Understand work restraint and fall arrest, including the use of a harness and lanyard
- Understand the use of tripods and winches for access and egress
- Follow procedures to safely enter, work in and exit level 3 confined spaces
- Use PPE and level 3 associated equipment correctly and safely
- Be confident in the use of respiratory protection, self-contained and escape breathing apparatus
- Be able to undertake the role of the confined space supervisor (top person)
- Understand procedures for and be confident dealing with emergencies

SO WHAT DOES THIS MEAN...

- This 2 day (initial) course will teach your team the legislation in an easily understandable way, what you are able to do in a high risk and how to set up and supervise the space. [Revalidation is 1 day]
- How to deal with emergencies and escape wearing breathing apparatus (like firefighters)
- Learn practically in our training rig :- how to gas monitor the space, enter, supervise using tripods, davits and ventilation equipment.

ELEMENT

SAFETY ♦ TRAINING ♦ RESCUE
